Marketplace Website Process

I want to create a **Computer Store Marketplace website similar to Khmer24 or Taobao**, where many sellers can register and sell computer products through my platform. I am not the seller; I provide and manage the marketplace platform.

The website process will be:

1. User Registration

- Users can register and log in.
- Users can act as customers.
- Users can request to become sellers.

---

2. Seller Registration and Approval

- A user submits a request to become a seller.
- The administrator reviews the seller's information.
- The administrator can approve, reject, or suspend the seller.
- Only approved sellers can sell products.

---

3. Store Management

- Each approved seller can create and manage their own store.
- Sellers can add their store name, logo, description, contact information, and other store information.

---

4. Category Management

- The administrator provides the available product categories.
- Sellers can only select categories provided by the platform.
- Example:
    - Computer, CPU, GPU, RAM, Motherboard, SSD, HDD, PSU, Case, Monitor, Keyboard, Mouse, Accessories

5. Brand Management

- The administrator provides the available brands.
- Sellers can only select brands provided by the platform.
- Example:
    - Intel, AMD, NVIDIA, ASUS, MSI, Gigabyte, Corsair, Kingston, Samsung, Western Digital

---

6. Product Creation

- Sellers can create products for their store.
- Sellers enter the product name, price, stock, description, condition, warranty, and specifications.
- Sellers must select a category and brand from the options provided by the platform.

---

7. Product Image Limits

- The platform controls how many images a seller can upload for each product.
- Example: maximum **8 images per product**.
- The platform can also control the maximum image file size and allowed image formats such as JPG, PNG, and WEBP.

---

8. Product Specification Rules

- Different categories can have different specifications.
- For example, a CPU can have:
    - Socket, Cores, Threads, Base Clock, Boost Clock
- RAM can have:
    - Capacity, DDR type, Speed, Number of modules
- Sellers fill in the specifications required by the platform.

---

9. Product Approval

- When a seller creates a product, the product is submitted for review.
- The administrator or staff reviews the product.
- The product can be approved or rejected.
- If rejected, the seller receives a reason and can edit and resubmit the product.

---

10. Product Publishing

- Only approved products are visible to customers.
- Sellers can update their product information, price, and stock.
- Important changes can require another review.

11. Customer Product Search

- Customers can search for products.
- Customers can filter products by:
    - Category, Brand, Price, Condition, Seller, Rating, Availability

---

12. Product Details

- Customers can view:
    - Product images, Product name, Price, Stock, Brand, Specifications, Description, Warranty, Seller/store information, Customer reviews

---

13. Shopping Cart

- Customers can add products to their cart.
- Customers can change quantities or remove products.
- The system checks product stock before checkout.

---

14. Checkout

- Customers select their delivery address.
- Customers select a shipping method.
- Customers select a payment method.
- The system calculates the total price.
- Customers confirm the order.

---

15. Payment

- The customer makes the payment.
- The system records the payment status.
- Example:
    - Pending, Paid, Failed, Refunded

---

16. Order Processing

- After payment is confirmed, the seller receives the order.
- The seller prepares the product.
- The seller ships the product.
- The seller provides tracking information if available.

17. Order Tracking

- Customers can view their order status.
- Example:
    - Order Placed, Payment Confirmed, Processing, Shipped, Delivered, Completed

---

18. Review and Rating

- After receiving the product, customers can review the product.
- Customers can give a rating and write a comment.
- Customers can also rate the seller/store.

---

19. Return and Refund

- Customers can request a return or refund.
- The seller can approve or reject the request.
- If there is a dispute, the administrator can review the case.

---

20. Seller Management

- Sellers can:
    - Add products, Edit products, Manage stock, Manage prices, View orders, Process orders, View sales, Manage their store

---

21. Administrator Management

- The administrator controls the entire marketplace.
- The administrator can manage:
    - Users, Sellers, Stores, Categories, Brands, Products, Orders, Payments, Refunds, Reviews, Reports, Platform settings

---

22. Platform Rules

- The administrator can define marketplace rules.
- Example:
    - Maximum product images: 8
    - Maximum image size: 5 MB
    - Allowed image formats: JPG, PNG, WEBP
    - Maximum product name length: 150 characters
    - Maximum description length: 5,000 characters

- Seller approval required: Yes
- Product approval required: Yes
- Seller can create categories: No
- Seller can create brands: No

---

Customer Reviews Product/Seller

The main idea is that **sellers provide the products, while the platform controls the marketplace rules, categories, brands, product requirements, approvals, users, orders, and other system functions.**
